

## function

- (1) battery test    (2) alternator test
- (3) crank motor test

## voltage range

only 12V

## species

Lead Acid

## type

4    5    Z6    7    7B  
8    9    9B    10    12  
12B    14    14B    20    30

## descriptions

A special designed battery analyzer to test the condition of the lead-acid battery on motorcycle/scooter by using conductance method.

It's not like the conventional method of draining; we test the battery by applying resistance load to it and obtain the result from the meter gauge.

This analyzer utilizes a series of pulsed voltage across the battery cells and observes the AC current that flows in response to it. It's a passive and safe method; it will never discharge or drain the battery.

Besides, this analyzer also provides check the Alternator's charging and Starter's cranking conditions.
